

I support RM10352. Allignment of 160 meters with other HF bands in respect to separate spectrum for wide band and narrow band modes will help eliminate conflict between users. Increased popularity of 160 calls for mandated separation. If mode segmentation of the other HF bands was based on voluntary band plans, they would be a mess. 160 has shown some signs of going that direction already. Please maintain sanctuary for continued narrow band experimental and weak signal work on 160 meters.
